

## **PANEL SESSION – Multicore, Will Startups Drive Innovation?**

### **Organizer:**

A Jerraya, CEA-LETI, FR

### **Moderator:**

R Ernst, TU Braunschweig, DE

Multicore solution is a need imposed by both technology and market constraints to replace a large part of FPGA and ASIC products for the embedded system market. So far, many solutions featuring a variety of ad-hoc hardware and software multicore architectures have been developed mainly by startups. No clear winning solution has emerged so far to conquer a significant part of this fast growing market. The panel will present the most promising products and solutions and discuss the winning strategy to market.
